

Meeting with Dean Feldman-20260804_140219-Meeting Recording

4 August 2026, 12:02pm

35m 37s

● **Dean Feldman** started transcription

SU **Shayna Unterslak** 0:04

of them. This is like your startup. As in, he doesn't care if you have a sprint stand up once a week or once a month. As long as you document it, justify it, and actually do it, you decide all your rules. So we kind of have to decide what we want to do. And as long as we keep to what we decide, we fight.

● 0:07
Mm.

DF **Dean Feldman** 0:20

Well, I think...

Like our stand-up should be at least, what, two times a week?

SU **Shayna Unterslak** 0:26

I don't think WhatsApps count. It didn't seem like WhatsApps count from how he spoke about it in class.

DF **Dean Feldman** 0:30

Yeah, yeah, so if it has to be a call like this.

BS **Ben Swartz** 0:31

That's like, yeah, expect the teams call for 10 minutes, yeah.

NS **Nadav Sundy** 0:32

Yes.

DF **Dean Feldman** 0:35

If it's a call like this, then two times a week is fine, but if WhatsApp counts, then we

can do what?

Even more.

NS **Nadav Sundy** 0:44

As little as we have to.

SU **Shayna Unterslak** 0:46

Exactly, that's what he said. He was like, be clever. Do as well as you need her, as long as you justify.

DF **Dean Feldman** 0:51

And also, AI is gonna do all of this, so...

SU **Shayna Unterslak** 0:55

Not the stand up, we have to be there and do that.

DF **Dean Feldman** 0:55

The.

NS **Nadav Sundy** 0:58

He never actually said that. He would just have to attribute it to AR. There was no requirement for us to physically be in the stand up. We can have AR agents doing the stand up for us as long as we tell him it was an AR agent.

DF **Dean Feldman** 0:58

No, I know.

We can have our chats, talk to each other.

NS **Nadav Sundy** 1:10

Have we considered that? Have we considered that?

SU **Shayna Unterslak** 1:13

But.

No, have you fought it?

DF **Dean Feldman** 1:15

But anyway, let's decide what language is recording in.
Same as last time, I suppose. Can we use top script instead of JavaScript this time?
TypeScript just allows you to have error detection.

NS **Nadav Sundy** 1:29

It makes.
No difference to me.

DF **Dean Feldman** 1:33

TypeScript is an add-on to JavaScript. It gives you error. JavaScript doesn't throw errors. TypeScript will throw an error.

R **Raz** 1:40

Right.

DF **Dean Feldman** 1:42

But it's the same syntax and same everything. So I think can we use that rather.

NS **Nadav Sundy** 1:46

Shut.

BS **Ben Swartz** 1:47

Yeah, I'm happy to, yeah.

DF **Dean Feldman** 1:49

So, we can use what? What was the front end for last time? It was React and Vite, and
OK, so we'll do React and Vite and TypeScript back end node and TypeScript and
Express.

BS **Ben Swartz** 1:54

Yeah.
Yeah, no express, yeah.

DF **Dean Feldman** 2:04
K.

BS **Ben Swartz** 2:05
And also because, yeah, next, next also gives us the stuff, so it's like from the lab, it's like that's obviously.

DF **Dean Feldman** 2:06
How about it?

NS **Nadav Sundy** 2:12
Ohh.
Okay.

BS **Ben Swartz** 2:15
The one that he quoted us to use, I'm saying, not for the project, I'm saying, well, as I'll use the same thing I just had for the lab to use.

DF **Dean Feldman** 2:19
Yeah.
What did he say in the lab to use next?

BS **Ben Swartz** 2:26
Um, using expert based in node, but yeah.

DF **Dean Feldman** 2:30
Well, let's do what we're comfortable with. We know how to do it from SD, so it's fun.

BS **Ben Swartz** 2:34
Okay, cool. Perfect. I'll get that.

DF **Dean Feldman** 2:37
Database or we use Supabase again.

BS**Ben Swartz** 2:40

The only thing I just, I don't know if you mentioned in class, because the brief says you can't use things that, like we have to write our own endpoints, you can't use APIs, but I don't know if that means that.

SU**Shayna Unterslak** 2:49

He specifically mentioned Super Base and said that Super Base can do it for you.

DF**Dean Feldman** 2:49

That's what.

BS**Ben Swartz** 2:51

I know, but I'm saying, does anything we can't use the platform, we just can't use the APIs in the platform?

DF**Dean Feldman** 2:55

What we did for SD last semester when we had that big app.js thing that we wrote, that we had all of our endpoints in, that's what we have to do this time.

BS**Ben Swartz** 3:04

I think we wrote that, but we still use supervise.

SU**Shayna Unterslak** 3:05

I wrote from class, I wrote from class, can't use Superbase or Firebase, write HTTP endpoints. AI can write them for you.

DF**Dean Feldman** 3:14

End.

BS**Ben Swartz** 3:14

We did that last time, but we still need somebody to store the database. So if we, I'll ask an overflow, but I'm saying, because we need a place to have the database.

DF**Dean Feldman** 3:23

Nothing.

I think he meant don't use the Superbase tool to make an endpoint.

BS Ben Swartz 3:29

Yeah, that's also what I think, but I'll ask on the if we not, then then if we all are these, then yeah, that makes the most sense because it's the same as last time.

DF Dean Feldman 3:35

Hello!

Well, yeah, I think it's, I think, well, yeah, let's ask and we can find out. Otherwise, we'll go from there.

BS Ben Swartz 3:43

Yeah.

SU Shayna Unterslak 3:44

We just have to store in South Africa because he mentioned puppy and I think there's an issue with having it overseas then.

DF Dean Feldman 3:48

Yeah.

BS Ben Swartz 3:51

Oh, well then we call you supervise because...

NS Nadav Sundy 3:51

No, that's only if it's government data.

BS Ben Swartz 3:55

Have fun.

SU Shayna Unterslak 3:56

Oh, it's gonna be fun.

DF Dean Feldman 3:56

No, he mentioned puppy. That was a question they asked when we when they presented last year. Is your thing puppy compliant? So if ours isn't, it isn't. We just know that it is or isn't. It doesn't have to be. Just justify.

NS **Nadav Sundy** 4:07

We'll just, it's not hard to make it public compliance.

R **Raz** 4:08

Mm.

BS **Ben Swartz** 4:08

Well, I don't think, I don't think stats from a sport from sports public games, they're not really, we aren't storing any private information.

NS **Nadav Sundy** 4:14

Yeah.

DF **Dean Feldman** 4:15

Yeah.

SU **Shayna Unterslak** 4:15

Yeah.

R **Raz** 4:17

Unless you make like a user login where you have to put your e-mail and stuff.

DF **Dean Feldman** 4:20

No, but that would be done by Google, and Google would store that forever. We'll use Google OAuth again.

R **Raz** 4:25

Okay, fair.

Authentication.

DF **Dean Feldman** 4:29

Then, what Azure and Azure for our deployment, I guess.

BS **Ben Swartz** 4:32

The.

Yeah.

DF **Dean Feldman** 4:37

I don't, we got it working again last time, so it was fun.

BS **Ben Swartz** 4:40

This.

NS **Nadav Sundry** 4:42

Yeah.

LR **lira rosenberg** 4:42

Yeah, just let's just use the things we know how to use.

DF **Dean Feldman** 4:42

Um...

NS **Nadav Sundry** 4:44

Yeah.

BS **Ben Swartz** 4:45

Yeah, and I can say like the CR and the CT, like we'll just use it through.

DF **Dean Feldman** 4:45

Yeah.

Well, I'll, we can actually just duplicate for a bit of logs, and we'll be fine.

BS **Ben Swartz** 4:53

Yeah, I was saying for like the testing and the testing and the that whole framework,

we're just gonna use the get out like use like we'll get tea, but all of those things we're not gonna use an external tool.

NS **Nadav Sundy** 4:55
Okay.

SU **Shayna Unterslak** 5:01
Yeah.

DF **Dean Feldman** 5:05
Well, it's all in Gitsy. The only thing...

SU **Shayna Unterslak** 5:05
No.

BS **Ben Swartz** 5:07
That's I'm saying, yeah.

DF **Dean Feldman** 5:09
The only thing I noticed that Git T doesn't have is GitHub pages. So we're going to, he mentioned that we had to have a documentation. So like, remember we had that Word document that we just updated every time we did something. So we have to have something like that. So I think Shane and I were talking about it in the lecture. We'll use.

LR **lira rosenberg** 5:23
Yeah.

BS **Ben Swartz** 5:23
Yeah.

DF **Dean Feldman** 5:29
wiki, GitHub, Git T wiki, it's in there. That's what Git T has. But then he also wants us to have our full documentation, so like the final documentation as a deployed website. So we can use GitHub pages, it's just we'll just have to post the GitHub

pages on someone's website.
Personal GitHub, and you're just...

NS **Nadav Sundy** 5:50

There's another thing called Netlify you can use. I don't know how, but Ben Schmidler uses it for...

BS **Ben Swartz** 5:51

That's all.

R **Raz** 5:51

Ohh.

DF **Dean Feldman** 5:54

Your eyes.

SU **Shayna Unterslak** 5:54

Does it need an account?

NS **Nadav Sundy** 5:57

I don't know, but Ben Schmuckler uses it to host websites for Binet.

DF **Dean Feldman** 5:58

And there's Cloudflare.

SU **Shayna Unterslak** 6:01

He said in class never use anything that has an account because he's never going to log into one so if it has an account he'll never open it.

BS **Ben Swartz** 6:01

It's like the same as their so.

DF **Dean Feldman** 6:01

Is.

NS **Nadav Sundy** 6:02

App.

Yeah.

BS **Ben Swartz** 6:06

Yeah, all of those things that can be hosted, but I'm saying if you just need to see it, any of those things, we don't want to need an account because it's going to be publicly viewable.

NS **Nadav Sundy** 6:10

Yeah.

DF **Dean Feldman** 6:14

Yeah.

He just needs the link to see, okay, this is your documentation.

NS **Nadav Sundy** 6:16

Yeah.

BS **Ben Swartz** 6:20

Yeah, that's fun. That could be any of those times of those places.

DF **Dean Feldman** 6:21

And that, yeah.

LR **liona rosenberg** 6:21

So does it not have to be pushed to get tea? Can I just, like you say, just be hosted?
Oh.

DF **Dean Feldman** 6:24

It does.

No, it will be pushed to get, yeah, it will be pushed to push to get tea, but then we'll have someone's personal repo will have a GitHub pages repo so that we can use GitHub pages.

BS Ben Swartz 6:26
Just the doc, final doc.

SU Shayna Unterslak 6:27
B.
Why don't we just look what Cloudflare is? That's what he said he uses, Cloudflare pages.

DF Dean Feldman 6:40
Because.
We can look at it, but I just know that GitHub is the easiest.

LR liora rosenberg 6:48
But how do we push a page on GitHub to get to you? Like if it's...

DF Dean Feldman 6:52
You just give it the repo link in the branch it must get take off, but we can look at Cloudflare as well, Cloudflare.

NS Nadav Sundy 6:56
Yeah.

LR liora rosenberg 6:59
Okay.

DF Dean Feldman 7:00
And then there was also, we'll use GitHub, Git T projects. I assume it's the same thing, right?

BS Ben Swartz 7:06
Yeah, I, I looked at, it does look the same, like, looks like the same thing.

SU Shayna Unterslak 7:09
I had PTSD of those projects.

DF **Dean Feldman** 7:12

Yeah, and then we needed a we needed to scrub how we're going to set up our architecture, so we'll have a front end and a back end, but he I remember he mentioned in class we need to have a middle layer for database access, so it will be front end, the middle layer.

LR **lira rosenberg** 7:12

Yeah.

BS **Ben Swartz** 7:30

Well.

DF **Dean Feldman** 7:31

And then the back end will only access database, if that makes sense. Alright, he mentioned something like that, please.

BS **Ben Swartz** 7:34

Yeah.

They're just adding a level of abstraction, basically, so that then the front and back end don't speak to each other, but yeah.

NS **Nadav Sundy** 7:38

Okay.

DF **Dean Feldman** 7:41

You are not, and...

SU **Shayna Unterslak** 7:41

Now, we're splitting logic and backend.

DF **Dean Feldman** 7:44

Yeah, but that also adds security because I know on our SD project, we could go into the thing and we could find our database very easily. So I think something that we

should consider is just to separate the front end is only front end. If we want to get data, it must go through a...

NS **Nadav Sundy** 7:58
Oh.

DF **Dean Feldman** 8:03
intermediary layer and that connects to the back end. And then we can have logic, we can have like a back end for the database and a back end for the logic only. I think we should set up like that somehow.

BS **Ben Swartz** 8:07
Perfect, yeah.
And.

SU **Shayna Unterslak** 8:19
As long as we document every decision we make, he said we can make whatever we want. So we just document this all.

DF **Dean Feldman** 8:19
And then.
We are, we're recording the vid. Cool. Then what else do we have to do?

BS **Ben Swartz** 8:30
We actually have to decide what sport we're having.

DF **Dean Feldman** 8:35
Dewey.

LR **liora rosenberg** 8:35
Does it just have to be one or for the advanced to their one clock, five different sports?

BS **Ben Swartz** 8:36
Um...

SU **Shayna Unterslak** 8:36

What has?

BS **Ben Swartz** 8:41

That says it here, I'll open it.

SU **Shayna Unterslak** 8:44

Which sport has the least statistics?

BS **Ben Swartz** 8:44

And.

Well, actually, you want to support that already has a database with lots of statistics.

DF **Dean Feldman** 8:50

Yeah, we want the sport. So something like the NFL or something like rugby or something like cricket, they have all these stats.

BS **Ben Swartz** 8:54

I think cricket, yeah, I think cricket makes the most sense because there's...

LR **lira rosenberg** 8:58

Really?

DF **Dean Feldman** 8:58

Okay.

You can get up all these stats.

BS **Ben Swartz** 8:59

Because there's so much so many data points and they're simple like basketball and NFL there's so many like, like, like, and we don't know the like, the truth is like there's so many different things. Cricket's like you bowl the ball and they hit it like there's not many things that can like really happen.

LR **liora rosenberg** 9:06

Yeah, I guess you right.

NS **Nadav Sundy** 9:14

Guys, I'm sorry. I called to a project where I look at cricket data for 70 days.

LR **liora rosenberg** 9:15

Yeah.

Oh my god!

DF **Dean Feldman** 9:18

I also think, I don't think cricket is really boring. I think we have to get something a little bit more interesting, but something.

R **Raz** 9:19

I agree.

SU **Shayna Unterslak** 9:22

He.

LR **liora rosenberg** 9:23

So should we be proper South Africans and do rugby or is that too complicated?

NS **Nadav Sundy** 9:27

I agree, yeah, I think I agree.

DF **Dean Feldman** 9:29

Well, we not think her.

BS **Ben Swartz** 9:30

No, you're only looking at the data. We're not only looking at the data, we just need to find a database with the sport. I just think that rugby, there's so many different things of like turnovers and scrums and that's a hard thing to describe. Like cricket, you literally, it's batting and bowling, that's it.

NS **Nadav Sundy** 9:32
Oh.

DF **Dean Feldman** 9:44
Yeah, but we want it to be a...

LR **Iiora rosenberg** 9:44
Yeah, I actually hear that.

SU **Shayna Unterslak** 9:44
Inserting the data will be simpler, the less variables in Cricket, right?

BS **Ben Swartz** 9:47
That's what I'm saying. I think that dot is simpler in cricket.

DF **Dean Feldman** 9:50
But we also want to make it look better because this is AR. We need some distinguishing factor to say, okay, we've actually thought about our output.

SU **Shayna Unterslak** 10:01
Yeah, but we can do that for any sport, right?

DF **Dean Feldman** 10:03
Well, if we don't have enough data, we can't do that.
If you need them.

NS **Nadav Sundy** 10:07
No, we just have to make it cool. At least just look at us. I think that's like half the box. It's honestly just going to be doesn't look at us because...

DF **Dean Feldman** 10:13
Yes, upwards.

BS **Ben Swartz** 10:14

No, no 100%, but I think also the Crimson Cricket's the second biggest sport in the world, like there's no way there isn't already an Indian database, if I'm being honest.

LR **liora rosenberg** 10:22
This.

BS **Ben Swartz** 10:23
It's the second biggest ball in the world.

NS **Nadav Sundy** 10:24
It looks like there's three databases for everything. If you get up to 100 requests A day.

R **Raz** 10:24
Bruh.

BS **Ben Swartz** 10:30
For any sport.

NS **Nadav Sundy** 10:33
Yeah, I like all different ones. It's got one, there seems to be lots.

SU **Shayna Unterslak** 10:37
Okay, and I think we do the one where getting the statistic, like having the data is one thing, but using the data to get statistics is as simple as possible. Because then we have time for the front end stuff.

DF **Dean Feldman** 10:48
Yeah, and then I've got a whole bunch, I've got a lot of tools that I think we should use for front end. I'll send a list here and you can give it to chat and you can give it to Claude and it will just, it will do everything and it makes things look very nice. It gives animations, gives little pop-ups.

NS **Nadav Sundy** 10:56
Yes.

DF **Dean Feldman** 11:06

Um, but yeah, I'll send a screenshot chat. There's six of them. I think we should you guys can look through them, um, but...

LR **liora rosenberg** 11:14

Dean, did you figure out with our student emails for anti-gravity or no?

DF **Dean Feldman** 11:19

I can't get it to you. I've looked into it. I can't get it to give us. It's just giving us the free version. I don't know.

LR **liora rosenberg** 11:25

Oh, I mean, at least it's something, right?

DF **Dean Feldman** 11:27

I figured it out. I've got it on my...

I've got downloaded it, but it's giving us the free one. The free one literally lasted me 5 minutes. I put a prompt in and it was finished. I put in a five-line prompt and it was done within 5 minutes. I didn't have any. It wasn't valuable, if that makes sense.

LR **liora rosenberg** 11:45

Bye.

DF **Dean Feldman** 11:46

So, yeah, that's you can look into it, but it's I think rather just use Chat and Claude, but yeah, what else?

SU **Shayna Unterslak** 11:55

Guys, do we get to decide the sport or does our client have to decide that? Like, what do we get to decide?

DF **Dean Feldman** 12:00

Well, that.

It says unsatisfied with, it says insert favourite sport chat. So what's our favourite sport?

R **Raz** 12:09

Lacoste, Lacrosse.

DF **Dean Feldman** 12:12

The.

NS **Nadav Sundy** 12:15

How many other groups have this project?

DF **Dean Feldman** 12:17

Or, I think, let me have a look.

NS **Nadav Sundy** 12:21

Like, can we do something that, like, even if it might be different, like, just do it something different? It's not just like every group is doing a soccer or cricket or rugby one, like...

R **Raz** 12:30

We could do Formula One, maybe.

SU **Shayna Unterslak** 12:31

That about your suggestion, swimming.

LR **liona rosenberg** 12:31

Just.

Ohh, Formula One C.

NS **Nadav Sundy** 12:33

Duck, we could do that.

R **Raz** 12:35

Yeah, for me, no one has enough stats you could do.

DF **Dean Feldman** 12:39
We could do something.

BS **Ben Swartz** 12:40
So it's quite simple, because there's only 20, I'm saying there's only like X amount of races, only twenty-two drivers, so...

R **Raz** 12:48
Yeah.

NS **Nadav Sundy** 12:48
We can do Formula One, Formula Two, Formula Three.

LR **lira rosenberg** 12:51
Wait.

DF **Dean Feldman** 12:51
We could do cycling. There's a lot of stats in cycling, but I know that it's a bit biased towards me.

BS **Ben Swartz** 12:52
Yep.

LR **lira rosenberg** 12:54
Hell, no.

SU **Shayna Unterslak** 12:56
Roger.

LR **lira rosenberg** 12:56
The.
Yeah.
Sweetie netball, guys.

R **Raz** 13:00

Chatch BT says.

I know.

SU **Shayna Unterslak** 13:04

Well, you're not the probably the only one to know how that works, even.

R **Raz** 13:05

Chat TV.

DF **Dean Feldman** 13:05

And.

LR **liora rosenberg** 13:06

Yeah.

Yeah, true.

BS **Ben Swartz** 13:09

I know the rules on that phone.

R **Raz** 13:10

Cheque.

LR **liora rosenberg** 13:11

Well, thanks Ben. Representatives.

NS **Nadav Sundy** 13:12

Yeah, don't move or something with the ball.

BS **Ben Swartz** 13:13

S.

LR **liora rosenberg** 13:15

Yeah.

SU **Shayna Unterslak** 13:17

Mhm.

DF **Dean Feldman** 13:17

Okay, and what else do we have to do for this? We have to do this.

SU **Shayna Unterslak** 13:21

Well, we have to do like sprint one isn't actually, there isn't much coding in the rubric. It's all like actually, we have to decide on our stuff.

BS **Ben Swartz** 13:25

Basically, not cracked it down.

DF **Dean Feldman** 13:27

Brosis.

Is this considered sprint one or does sprint one only start on the 25th of August?

BS **Ben Swartz** 13:34

No, we like we presenting on the 25th.

SU **Shayna Unterslak** 13:34

No, it ends on the 25th of August.

DF **Dean Feldman** 13:37

OK, so then this is technically we this is the start of Sprint One. Um, our last time we split it up, we did front-end person, database person, now we're going to do the same thing.

BS **Ben Swartz** 13:41

Yeah.

NS **Nadav Sundy** 13:51

Yeah, I think we should.

BS **Ben Swartz** 13:51

Yeah, I'm happy to dance.

R **Raz** 13:51

Yeah, I don't know.

DF **Dean Feldman** 13:52

But I think it should be different considering we've all done it. We'd like Ben wouldn't do the database again because he's done database and rather someone else should do the database if that makes sense.

BS **Ben Swartz** 14:03

I don't know, I can do, yeah, I'm happy with anything, but maybe, yeah, I'd be definitely, I think it makes sense, definitely to split up, like, as a thing, but I'm saying, or two, two backend to middleware, like, I can't really, we can do that.

DF **Dean Feldman** 14:06

I don't know, but we should.

NS **Nadav Sundy** 14:07

Although this was a...

Too many of us just put up.

Yeah.

DF **Dean Feldman** 14:19

Yeah, I think so. Having one, well, we need more than two front-end people, I think is good, because that's our defining factor, really. That will...

LR **lira rosenberg** 14:29

But then those people have to agree on it because then things get messy.

DF **Dean Feldman** 14:35

No, yeah, but the front end is what they're going to mark us on mostly because the

back end we're not thinking about really. That's what chat's doing. So front end, someone on the database, that we just need one person to do that. Secure, look.

R **Raz** 14:37
But.

LR **liora rosenberg** 14:42
Yeah, yeah.

DF **Dean Feldman** 14:53
What else is there, logic?

SU **Shayna Unterslak** 14:54
I think the database in this one is actually complicated. Our whole thing is a database, no? Like a statistics.

LR **liora rosenberg** 15:00
Yeah.

DF **Dean Feldman** 15:00
It is.
But chat to.

BS **Ben Swartz** 15:03
Darbase is going to be huge.

NS **Nadav Sundy** 15:03
No, because a lot of it will be derived, so it's just in logic.

DF **Dean Feldman** 15:06
We also need documentation.

BS **Ben Swartz** 15:06
Yeah, but it's still gonna...

SU **Shayna Unterslak** 15:06

Yeah, the logic, the logic needs the most.

BS **Ben Swartz** 15:09

The other thing, the job is still be large. I'm saying, like, still gonna be lots of tables and lots of different relations. There's gonna, but you exactly, we're not gonna have to decide what it looks like. Lost Tommy did.

DF **Dean Feldman** 15:09

We need documentation.

We didn't didn't cheque, just.

BS **Ben Swartz** 15:21

I'm saying we didn't, but like we me, I'm saying obviously there was less data, like I think the data that we get will be much more informative of what the database has to look like this time.

DF **Dean Feldman** 15:27

Yeah.

BS **Ben Swartz** 15:32

I think.

DF **Dean Feldman** 15:32

Yeah, so I don't know how we should split it up by people, or if we should split it up by people.

BS **Ben Swartz** 15:38

Which we can just do like, yeah, we can just like put a poll in the group and then I can take what they want to do.

DF **Dean Feldman** 15:44

I just asked chat, they said one person should do like the requirements and the project management. So like what Shayna did last time. Another person should do

the back end with the OAuth. Another person should do database, event models and statistics. Member 4 should do the front end, the UX, accessibility and responsiveness.

LR **Iiora rosenberg** 15:53
Yeah.

DF **Dean Feldman** 16:06
Member 5 should do testing, or we need to do testing, quality assurance and testing evidence. And member 6 should be Azure CRCD security and integration.

NS **Nadav Sundy** 16:17
So, there's like 3 roles, one chain of the last one.

DF **Dean Feldman** 16:17
Good luck.
Exactly, but also some of these things we set up once. Like Azure, we're going to set up once and we'll be done. The database will also set up once and we'll be done.

NS **Nadav Sundy** 16:22
Thank you.

BS **Ben Swartz** 16:28
Well, also goes, and also the front end, they're not really going to be doing until we've done all those points off. I'm saying it will, but like very simply.

DF **Dean Feldman** 16:35
Yeah, like for this sprint, it's not good. We're not going to be doing any front end stuff. It's more about setting up our, setting up our CRCD. So should we rather split it like that?

LR **Iiora rosenberg** 16:46
Yeah, maybe each sprint we can all just be like, this is what needs to be done.

BS **Ben Swartz** 16:48

Yeah, let, yeah, let's do, yeah, let's change, yeah, as in, let's go, yeah, let's say, I think, like, for per sprint, we'll figure out what needs to get done, and then based off that, we'll see where each people need to go, like I'm saying, sprint four, maybe we need four people on UR and one person on the back end, but like sprint on, yeah.

DF **Dean Feldman** 16:50
Yeah.

R **Raz** 16:50
Yeah.

LR **lira rosenberg** 17:03
Yeah.

DF **Dean Feldman** 17:04
Yeah, but also our exam is going to be on everything. So things like setting up the Google Auth. I remember we, in the lecture, we said we would like to do it as a group, but I don't know if...

NS **Nadav Sundry** 17:05
Okay.

R **Raz** 17:07
The.
Yeah.

SU **Shayna Unterslak** 17:15
I doubt we're going to have to do Google Auth in the exam.

R **Raz** 17:15
But.

DF **Dean Feldman** 17:20
But we'll have to set up Azure, so I'll have to show everyone how Azure is done.

SU **Shayna Unterslak** 17:23
Yeah.

LR **lira rosenberg** 17:25
Yeah, please, Dean.

DF **Dean Feldman** 17:27
Then what else?

SU **Shayna Unterslak** 17:27
I'm sure we'll be the next lab.

DF **Dean Feldman** 17:30
I hope not, because this year is the worst, but it's fine. And what else do you guys think we need to do? We just need to do requirements.

R **Raz** 17:32
The.

LR **lira rosenberg** 17:32
Yeah.

DF **Dean Feldman** 17:43
backlog creation thing and setting up our project.

BS **Ben Swartz** 17:47
Then in the sprint when Rubik, the entire backlog.

DF **Dean Feldman** 17:51
Is that what the one rubric is?

BS **Ben Swartz** 17:53
That's what I'm asking. I looked at it, but let me see now for the rubric this time we

need.
Just here.

DF **Dean Feldman** 18:03
Sprint lines.

BS **Ben Swartz** 18:05
Yes, but it says this version control.

DF **Dean Feldman** 18:08
Go get that.

BS **Ben Swartz** 18:09
Documentation site.
I'm getting started in DevCar, so that's basically just a read me.
A work tracker, which is just will use, yeah, get methodology, that's everyone, just make sure you use the correct methodology when you.

DF **Dean Feldman** 18:20
That will be GitHub projects.
No, well, that will...

SU **Shayna Unterslak** 18:27
We have to decide on one.

BS **Ben Swartz** 18:29
Yeah.

DF **Dean Feldman** 18:29
That will also put that will be in the documentation. I recommend for everyone, when we get this documentation up, the one that the GitHub wiki, the one that we're going to update as if it's a Word document, just give that to your Claude or your chat and tell it to constantly reference it.

SU **Shayna Unterslak** 18:42

But why can't we just have one thought where we continuously update and not be the one that's deployed? Why do we need to?

BS **Ben Swartz** 18:43

Hey.

DF **Dean Feldman** 18:50

Because he said that you have to have one for the final one and then one as a manager really thing.

SU **Shayna Unterslak** 18:56

Where does it say that?

DF **Dean Feldman** 18:58

That's what chat told me that it said.

SU **Shayna Unterslak** 19:03

I know.

DF **Dean Feldman** 19:04

Well, we've done our tech stack. We've just listed our tech stack, so we've got 5% already.

BS **Ben Swartz** 19:09

Yeah, then stakeholder interaction, we can only that and the and the and the requirements we can only do once actually it gets back to us then.

DF **Dean Feldman** 19:19

Yeah, I think he'll only get back later because he is technically at that he's doing tutoring now, so...

SU **Shayna Unterslak** 19:19

Right, but I think...

BS **Ben Swartz** 19:25

Yeah, that would think it's fine. We can, if we can, before we meet him, just decide on this, because he's not going to come out the stack, he's going to care about the requirements. So then we can ask him which sport he prefers and what he wants to get out of it, and that will think he needs to call us on what the requirements are. Unless he's like Lillian and he said, do whatever you want.

NS **Nadav Sundy** 19:42
Yeah.

LR **liora rosenberg** 19:44
Yeah, let's pray.

NS **Nadav Sundy** 19:44
My ChatGPT says we should do T20 cricket. It says T20 cricket is your best option. And then tennis.

DF **Dean Feldman** 19:45
I am really hoping he's like Billy.

SU **Shayna Unterslak** 19:51
I.

R **Raz** 19:52
Yeah, mine also said tennis.

LR **liora rosenberg** 19:53
Tell us.

BS **Ben Swartz** 19:54
My tennis is cool.

NS **Nadav Sundy** 19:56
But it says tennis simplest event model but less feature rich. It says T20 cricket's the best overall because pretty much it's not too complicated but it's not too basic. Yeah.

LR **liora rosenberg** 20:10

Oh, that's fun.

SU **Shayna Unterslak** 20:12

No doubt, get ready to learn a lot about cricket.

NS **Nadav Sundy** 20:15

Can't wait, I love cricket.

DF **Dean Feldman** 20:15

Are we choosing cricket, or is this based on whatever our tutor says?

NS **Nadav Sundy** 20:19

I think let's choose cricket unless he says otherwise. Kind of if we tell him it's cricket, unless he has something that he wants, then we'll follow him. But like, I think we must kind of approach him a bit like Lily and just tell him what we're doing, and unless he doesn't like that, then.

BS **Ben Swartz** 20:23

Yeah.

DF **Dean Feldman** 20:23

Yeah.

Yeah.

NS **Nadav Sundy** 20:36

You know, because at the end of the day, the tutor probably doesn't want to make his decisions. Like he honestly couldn't care. He's just doing this so he can get his PMA hours. So like the more we do for him, the easier we make his laugh, the happier he's going to be.

DF **Dean Feldman** 20:36

Yeah.

BS **Ben Swartz** 20:37
Mm.

LR **Iiora rosenberg** 20:45
The.

DF **Dean Feldman** 20:49
Exactly, yeah.

BS **Ben Swartz** 20:50
Yeah, I'm good at that.

SU **Shayna Unterslak** 20:56
The one thing, yeah, we have to do different this time to last time is like actually decide at the beginning before we start what we wanted to look like so that we have.

DF **Dean Feldman** 21:05
Yes, there's a there's a method called the BMAD method, BMAD method. It's basically.

SU **Shayna Unterslak** 21:06
Everything we need.

DF **Dean Feldman** 21:16
What's it? Thinking first. So we, it's what we're doing now. You basically say, okay, this is what it will look like, this is what it's going to do, and this is how it's going to do it. And then we make all the requirements. And then every sprint we say, okay, this is the requirement documentation. You just paste it into your chats and then it does that for you. That's basically.

NS **Nadav Sundry** 21:29
Yeah.

BS Ben Swartz 21:34
And.

DF Dean Feldman 21:35
I think that's...

BS Ben Swartz 21:35
And we can only really do once he's spoken to our tutor. I'm saying what he wants it to do for like he might say, he might say like you guys run with it, but we can't do that until you know.

DF Dean Feldman 21:41
Yeah, exactly.

SU Shayna Unterslak 21:41
Yeah.

DF Dean Feldman 21:46
Yeah, but I think we should do an approach like that. We can use that method. And then basically every single sprint, we can split it up, say, okay, person one, you do this and you can formulate your requirement. Well, you won't formulate your requirements, but you'll get the requirement document and then you can get that done. But yeah.

SU Shayna Unterslak 21:46
Yeah.

DF Dean Feldman 22:10
Um...

SU Shayna Unterslak 22:10
So let me see what I wrote in class that he said we must start with. Let me just find it. Hang on.
Because if we decide all of that, at least we, like that doesn't require us to know what

our project is. The biggest, yeah, was give methodology. We have to decide all of that and document it and then we can stick to it. It was those questions on the last slide.

DF **Dean Feldman** 22:28

Should we use?

Yeah, sweet.

SU **Shayna Unterslak** 22:32

Like when to commit, how the rock commits, when to bronze, that stuff.

DF **Dean Feldman** 22:36

So, you just gotta decide.

LR **lira rosenberg** 22:37

Yeah.

NS **Nadav Sundry** 22:37

I think we can decide it, and then put made by ChatTVT at the bottom.

BS **Ben Swartz** 22:42

Does anything that says all repos feature read me and getting started, and so does he you think we must for all the different parts like the front and the back end must have separate repos per per thing on the on the rubric it says all repos or some some to most or no to some?

NS **Nadav Sundry** 22:43

Yeah.

DF **Dean Feldman** 22:43

But.

NS **Nadav Sundry** 22:45

Okay.

DF **Dean Feldman** 22:57
Where does it say that?

BS **Ben Swartz** 23:04
Have A read-me.

LR **lira rosenberg** 23:06
But is not we just going to have one repo?

BS **Ben Swartz** 23:09
That's what I'm asking, but you don't miss anything.

DF **Dean Feldman** 23:09
Yeah, we're gonna have.
We'll have one refund.

BS **Ben Swartz** 23:12
Good afternoon.

SU **Shayna Unterslak** 23:14
So then what's old?

BS **Ben Swartz** 23:16
Yeah, that's what I'm asking.

DF **Dean Feldman** 23:16
Well, you might have more than one repo. You can, some projects are set up so that it's one repo for front end, one repo for back end, one repo for everything. But we're just going to have one.

SU **Shayna Unterslak** 23:18
Maybe each folder.

LR **liora rosenberg** 23:28

Why don't we just, yeah, let's just keep it how Git did it. I mean, GitHub did it.

DF **Dean Feldman** 23:30

We just, yeah.

And often, that's how they do it in the enterprise world. And that's how I saw it in my back work. They had a front-end repo and a back-end repo, and then they had one repo that just linked them together. So I think that's what he means.

SU **Shayna Unterslak** 23:49

So are we doing that or are we doing one repo with folders?

DF **Dean Feldman** 23:51

No, no, no, no, one repo.

NS **Nadav Sundy** 23:52

One refund.

SU **Shayna Unterslak** 23:53

Yeah, well just we can put a read me in each fall day in case and call it a day.

BS **Ben Swartz** 23:58

OK.

DF **Dean Feldman** 23:58

Yes, and then every time you generate something, you just need your commit needs to just say assisted bar and then your model. But that you just also have to put your AI policy rubric thing into Claude and chat.

SU **Shayna Unterslak** 24:12

Yes, he said every commit has to say either assisted by AR or no AR was used or something. He said you won't lose marks if you use AR and you won't gain marks if you don't, but you have to say that you either use it or not for everything, otherwise you will lose marks.

NS **Nadav Sundy** 24:18
No, no, no commit stunt.

DF **Dean Feldman** 24:24
Yeah, and if you didn't use it, you still have to say that you didn't use it.

LR **Iiora rosenberg** 24:25
Yeah.

NS **Nadav Sundy** 24:25
No, he said...
He said not for commits. He just said for documents. He said for commits if you don't, according to his AR policy, for a commit if you don't, you just say nothing. But for a document, you have to always say assisted or no AR was used. But for commits if you didn't use, you just don't say it was used.

DF **Dean Feldman** 24:40
Well...

LR **Iiora rosenberg** 24:40
But in the in our lab, in our lab, I put even with my commits assisted by.

NS **Nadav Sundy** 24:46
Oh

DF **Dean Feldman** 24:47
You don't mind too. I think, should we just...

SU **Shayna Unterslak** 24:48
Yeah, you have to.

NS **Nadav Sundy** 24:49
No, you have to for commits if you used AR. But you don't, if you didn't use AR for commits, you don't have to.

LR **liora rosenberg** 24:52
I won't.

DF **Dean Feldman** 24:52
I think.

LR **liora rosenberg** 24:54
I mean, we we are going to be, so just put a day.

DF **Dean Feldman** 24:57
I think as a standard, can we just say anything that we used AR for just included anything we didn't use AR for, regardless of if it's a commit or if it's a document or if it's code, just, well, code you'll add in the commit that you used AR for that. But I think.

LR **liora rosenberg** 25:04
I agree, yeah.

R **Raz** 25:05
Yeah, yeah.

DF **Dean Feldman** 25:13
Across all boards, don't leave out the fact that you did or didn't use it. Just to...

LR **liora rosenberg** 25:17
Agree.

DF **Dean Feldman** 25:20
Just in case, a job.
I think today or this week.
Uhh...
We can get up, get our info started, and we need it after we meet.

SU **Shayna Unterslak** 25:36

Before we do anything on the repo, we have to decide our methodology, because he said he doesn't care what you do, it has to be used the whole time. So don't commit or don't do anything until you've decided how we're doing that.

DF **Dean Feldman** 25:46

I haven't. I've made a replay and I've added a readme. That's about as much as we've done.

SU **Shayna Unterslak** 25:51

No, I'm just saying in general, don't do anything on the GitHub until we've decided our methodology.

DF **Dean Feldman** 25:55

Do you guys care how the methodology G is or can chat just make it for us?

BS **Ben Swartz** 26:00

Okay.

R **Raz** 26:00

Yeah, I don't mind it all.

DF **Dean Feldman** 26:02

I'm happy to just let chat make a certain methodology. You think we can add it to the document? Like I'm happy to last time for last project, I made the document structure. So I'm happy to go make a document structure now this afternoon, include all the documents, set up the things that can be done.

R **Raz** 26:09

Hmm.

DF **Dean Feldman** 26:21

But things like Google Auth and Azure will do next week, maybe.

SU **Shayna Unterslak** 26:30

Yeah, well, you need a project to do Google.

DF **Dean Feldman** 26:30
Yeah.

LR **lira rosenberg** 26:31
That.

DF **Dean Feldman** 26:32
And then also from next week, we'll also be able to make our product backlog because we would have met with our tutor. But yeah, I think for this week, should we just...
I don't mind setting up the project again; it didn't take long and I'll do the document structure.

NS **Nadav Sundry** 26:49
Yeah.

SU **Shayna Unterslak** 26:53
Well, maybe we should put that in the backlog as our beginning things.

LR **lira rosenberg** 26:53
I feel you.
Yeah, that's fine.

R **Raz** 26:57
Yeah.

DF **Dean Feldman** 26:58
As I make a project, we can add that.

SU **Shayna Unterslak** 27:00
Because one of his suggestions was to link commits to, I think Ben did last time, link commits.

BS Ben Swartz 27:04
Yeah.

R Raz 27:05
Hmm.

DF Dean Feldman 27:05
Ben did it last time. Every time he committed, he said it closed.

BS Ben Swartz 27:07
Yeah.

SU Shayna Unterslak 27:08
And I think it makes sense. I think we should do it.

DF Dean Feldman 27:10
I think so.

LR Iiora Rosenberg 27:12
Wait, what do you say?

BS Ben Swartz 27:13
Mm.

DF Dean Feldman 27:13
Every time Ben committed something he said closed X and then it and then it linked to the one in project. So closed use case one or use case two. So that that would be.

BS Ben Swartz 27:21
No.

LR Iiora Rosenberg 27:23
Oh, that's genius. Okay, fine.

NS **Nadav Sundy** 27:24
Uh.

SU **Shayna Unterslak** 27:24
Even Brendan said, like in class, say like sprint one, ticket 5, added button or whatever, like so that you link to what sprint and what were you trying to achieve with this commit.

BS **Ben Swartz** 27:34
Yeah, so it's not, yeah, so it says like, not like, it's like structured code that's in the code of doing something towards the project.

LR **lira rosenberg** 27:34
Okay.
Okay, fine.

DF **Dean Feldman** 27:40
So that will be part of our methodology document that we'll add.

BS **Ben Swartz** 27:46
I'll e-mail him now and ask him just about clarification about the database, if he means whether we can't use specific sites or if we can't use the APR functions on specific things. Yeah.

DF **Dean Feldman** 27:58
Yeah.

BS **Ben Swartz** 28:00
I think you reply to my e-mail quickly because there's no discord.

NS **Nadav Sundy** 28:03
The.

DF **Dean Feldman** 28:04

Or just put it on, is there?

NS **Nadav Sundy** 28:04

I think he learned his lesson about the Discord.

BS **Ben Swartz** 28:08

There is an overflow, but I don't know if it's... Actually, there isn't.

DF **Dean Feldman** 28:08

Is that? Yeah.

There isn't an overflow. You're going to have to just e-mail them.

BS **Ben Swartz** 28:14

So, I might have to e-mail him, yeah, 'cause I don't know if we can upload all that.

DF **Dean Feldman** 28:17

Yeah.

SU **Shayna Unterslak** 28:20

He's having, he said he's having trouble. I think it's the same issue where we all got that other other groups project submission because he's put us all in groups.

DF **Dean Feldman** 28:20

Ah.

BS **Ben Swartz** 28:29

Yeah.

SU **Shayna Unterslak** 28:30

So one of us is going to submit and the whole course is going to get it. So I think he's trying to figure that out.

LR **lira rosenberg** 28:34
Oh.

DF **Dean Feldman** 28:38
Yeah.

LR **lira rosenberg** 28:39
He also, I added all my documentation to my repo, but then in the e-mail it says you need to do your repo, your documentation and your AI policy. Is it fine if it's just all in one link?

DF **Dean Feldman** 28:40
But, anyway...
Oh.
Well...

BS **Ben Swartz** 28:53
Yeah, it will be only one link of your of your GitHub repo.

R **Raz** 28:54
In your case.

LR **lira rosenberg** 28:56
Okay, alright, fine.

DF **Dean Feldman** 28:57
Because it's just files inside, it's your repo, your repo will contain your docs and your docs will contain your IR transcripts.

LR **lira rosenberg** 29:02
Okay, cool.

BS **Ben Swartz** 29:02
Did everyone also use their personal GitHub for this lab?

LR **liora rosenberg** 29:05
Yeah.

DF **Dean Feldman** 29:05
Yeah.

BS **Ben Swartz** 29:06
Okay, cool.

NS **Nadav Sundy** 29:06
Yeah.

SU **Shayna Unterslak** 29:07
Yeah, he said we could.

BS **Ben Swartz** 29:09
OK, perfect.

DF **Dean Feldman** 29:10
But then, otherwise, should be up.

SU **Shayna Unterslak** 29:11
Huh.
Basically, we have to decide our methodologies and then once we meet to tutor and discuss all the requirements, we can actually get started.

BS **Ben Swartz** 29:19
Yeah, so basically, we have, yeah, we have, we can't, we like have an idea, but we can't actually start until we, so we can get like the structure sort of started, like I'll like the database I work on and then do this project, but then until we meet the tree, we can't at least do much more.

LR **liora rosenberg** 29:19
Okay, fine.

DF **Dean Feldman** 29:32

Yeah.

Yeah, today I'll just set up the GitHub projects and I'll set up the project structure, but otherwise we can't do anything until we wait for our tutor to reply to us. Once he meets with us and tells us what we have to do, then we can have a product backlog. And then the product backlog will basically be our requirements that we just tell chat to do.

SU **Shayna Unterslak** 29:34

Yeah.

BS **Ben Swartz** 29:37

Yes.

SU **Shayna Unterslak** 29:53

Initial design and development plan.

DF **Dean Feldman** 29:55

Yeah.

BS **Ben Swartz** 29:56

And.

DF **Dean Feldman** 29:57

But then we also need to decide on our meetings and our sprint reviews and our what was it the other ones that when we had to write essays.

NS **Nadav Sundy** 30:04

Yeah.

SU **Shayna Unterslak** 30:05

We don't need it to review. He said you don't have to, as long as you don't say you're going to, you don't have to do that.

LR **liora rosenberg** 30:11
Unreal.

DF **Dean Feldman** 30:13
Well, Shannon, will you do all the documentation and that then? All the things that we've written now, can you put it into chat and make it into a document and then you can add it to the repo?

SU **Shayna Unterslak** 30:22
Yeah, yeah, sure. Well, I'll send it and we can decide what we want to do with it. We just, yeah, we have to make all the decisions and then once they're made, put them into AI, I think.

DF **Dean Feldman** 30:27
Yeah, and then...
Should we choose, should we just choose CloudFlare, because we know that it will work?

SU **Shayna Unterslak** 30:37
You see what he said he uses?

DF **Dean Feldman** 30:40
I know he uses Cloudflare. I remember he said, no, he uses C.

SU **Shayna Unterslak** 30:42
And he said something else. There were two things. He said he uses MD book. And Cloudflare.

DF **Dean Feldman** 30:50
Oh, there's also for, did we have to include diagrams for this as well? I can't remember, did you say we have to? Okay, then there's something called mermaid.

SU **Shayna Unterslak** 30:56
Yes.

LR **lira rosenberg** 31:00

Oh yes, he did say that.

DF **Dean Feldman** 31:00

And...

Mermaid, you can just draw diagrams in markdown files. We don't have to use drawer, we don't have to draw anything, but it is much easier and it's just because our pages, our Cloudflare pages or whatever pages we use, is just going to have the markdown file. So if we can use mermaid inside of markdown, it will just show all of the all of the.

Drawings and diagrams will be done.

NS **Nadav Sundry** 31:24

Mm.

Okay.

DF **Dean Feldman** 31:29

I will make her laugh easier.

LR **lira rosenberg** 31:31

Okay, cool. We'll use that then.

NS **Nadav Sundry** 31:32

And.

DF **Dean Feldman** 31:34

Um, but yeah, I don't know what else to...

Touch on besides, but just starting it, I suppose.

SU **Shayna Unterslak** 31:43

No, it's always hard to get started. Once we get started, we'll be fine. We just have to get into it.

NS **Nadav Sundy** 31:47
Yeah, the last project also took us a while to like...

DF **Dean Feldman** 31:48
Mm.

NS **Nadav Sundy** 31:51
Get into what we actually had to do.

SU **Shayna Unterslak** 31:54
Now hopefully we can learn from that and get into it quicker and also make decisions that make more sense.

DF **Dean Feldman** 32:00
But it will be quicker. We will, we won't have an issue with, because now we're not, we hopefully won't have to deal with all those nonsense and stuff, because we'll know somewhat what to do.

NS **Nadav Sundy** 32:01
And also.

DF **Dean Feldman** 32:14
But yeah, I think by tonight I'll have the project structure and the GitHub project up. We can look into whichever page we want. And then from whenever our tutor applies to us, then we can, from after that, then we can do our backlogs and stuff.

NS **Nadav Sundy** 32:15
Yeah.

DF **Dean Feldman** 32:33
Shannon, you can get the documentation up. Will you set up, Shannon, can you set up the GitHub Wiki maybe?

SU **Shayna Unterslak** 32:41

Yeah, I'll try.

Although, yeah, I'll try.

DF **Dean Feldman** 32:43

And then...

SU **Shayna Unterslak** 32:46

Let you know what is MD book that I want to look up what it is because if it's

DF **Dean Feldman** 32:46

Because I like you.

It's just a lockdown editor.

SU **Shayna Unterslak** 32:52

If it's that and we don't have to use GitHub Wiki and that connects straight to Cloudflare, we should just use it.

LR **lira rosenberg** 32:59

Greed.

SU **Shayna Unterslak** 33:01

Now, we don't need to add what we don't need.

DF **Dean Feldman** 33:08

Yeah, I don't know.

SU **Shayna Unterslak** 33:08

You said your documentation website?

As a suggestion, use a pre-established dock tool built on top of Markdown and deploy the site via a static way of posting. So why don't we just do MD book and Cloudflare pages and call it a day?

DF **Dean Feldman** 33:25

GitHub Git T Wiki is also empty and it's already installed. It's already there.

SU **Shayna Unterslak** 33:32

When I look at it.

DF **Dean Feldman** 33:34

Everything, all of these text things are marked down basically. I'm pretty sure.
We can look into it, but we need to discuss that and that will that can just be added to our documents and then once our documents are done, they shouldn't change really.

BS **Ben Swartz** 33:52

Okay.

SU **Shayna Unterslak** 33:52

France.

DF **Dean Feldman** 33:54

Okay, cool. Is that?

NS **Nadav Sundy** 33:54

Yeah.

SU **Shayna Unterslak** 33:54

Yeah, he said if you change them you have to document it everywhere and it's not worth it. So once you decide stick to it.

DF **Dean Feldman** 34:02

Okay, so Shannon, you can make the best one for us, and you can make 'cause.

SU **Shayna Unterslak** 34:05

Hey, I will make the best one for us.

NS **Nadav Sundy** 34:07

Yeah.

DF **Dean Feldman** 34:08

Yeah, yeah, but you can make sure it's the best one for us and you can make sure that it's the best one that AR will understand.

SU **Shayna Unterslak** 34:15

Yeah.

Okay.

DF **Dean Feldman** 34:18

Yeah, cool.

SU **Shayna Unterslak** 34:19

Let us know if your applause.

DF **Dean Feldman** 34:21

I will, he didn't reply to any, he didn't reply at all, so, but I'm sure he'll get to it only after the lab is done.

BS **Ben Swartz** 34:29

Yeah, after that, so, yeah.

DF **Dean Feldman** 34:32

Yeah, we need to one thing we have to do in his e-mail said we need to make sure our tutor fills in that form every time.

SU **Shayna Unterslak** 34:33

Yeah.

NS **Nadav Sundy** 34:37

Okay.

LR **lira rosenberg** 34:39

Yeah, we'll just remind at the end of each meeting or whatever.

DF **Dean Feldman** 34:40

But otherwise, yeah.

But otherwise, it's fun.

SU **Shayna Unterslak** 34:46

I hope he's not if he is.

LR **liora rosenberg** 34:48

Same, hope he's not competent.

DF **Dean Feldman** 34:49

But I think.

I think we must go in with this.

NS **Nadav Sundy** 34:52

Yes.

DF **Dean Feldman** 34:53

idea saying we're going to do X, Y, and Z for next meeting. And then hopefully it will turn out the same way that Lily was. Instead of asking him what he wants us to do, we'll just, we'll be proactive in this.

NS **Nadav Sundy** 35:01

And

LR **liora rosenberg** 35:03

Yeah.

BS **Ben Swartz** 35:03

Yeah.

I'm sure it also will be like I don't see like it's much easier for them to do it like that.

LR **liora rosenberg** 35:08

Yo.

NS **Nadav Sundy** 35:09
Yeah.

DF **Dean Feldman** 35:13
Yeah.
OK, cool. I'll get it done by up to now, hopefully, and then...

BS **Ben Swartz** 35:15
Yeah.

DF **Dean Feldman** 35:20
Well, we'll see, we'll see when you're at last, but anyway, I think...
The computing.

LR **lira rosenberg** 35:24
All right, thanks, Dean.

SU **Shayna Unterslak** 35:26
Lagos.

NS **Nadav Sundy** 35:28
Great, thanks guys. Cheers.

BS **Ben Swartz** 35:28
Thanks, girls.

DF **Dean Feldman** 35:28
Just bouncing.

LR **lira rosenberg** 35:29
Gosh, thanks.

BS **Ben Swartz** 35:30
Is.

 **Raz** 35:30
God.

 **Nadav Sundy** 35:31
The.

 **Raz** 35:32
Ohh.

 **Dean Feldman** stopped transcription
